

6.859: D3 Basics

Concepts Overview

www.yellkey.com/deal

Data Binding

How do our elements and data connect?

Data

Nodes

Enter

Update

Exit

```
.join(  
  enter => enter.append('li'),  
  update => update,  
  exit => exit.remove()  
)
```

```
.join(  
  enter => enter.append('li'),  
  update => update,  
  exit => exit.remove()  
)
```

```
.join("li")
```

Scales

eg: How do I go from population numbers to pixels?

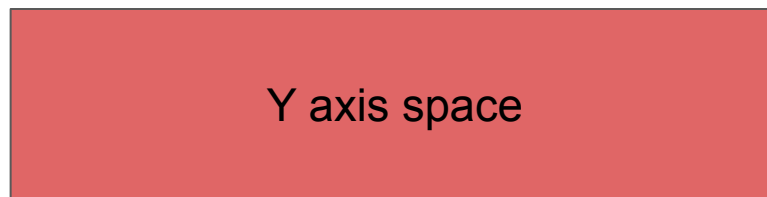

0

Population

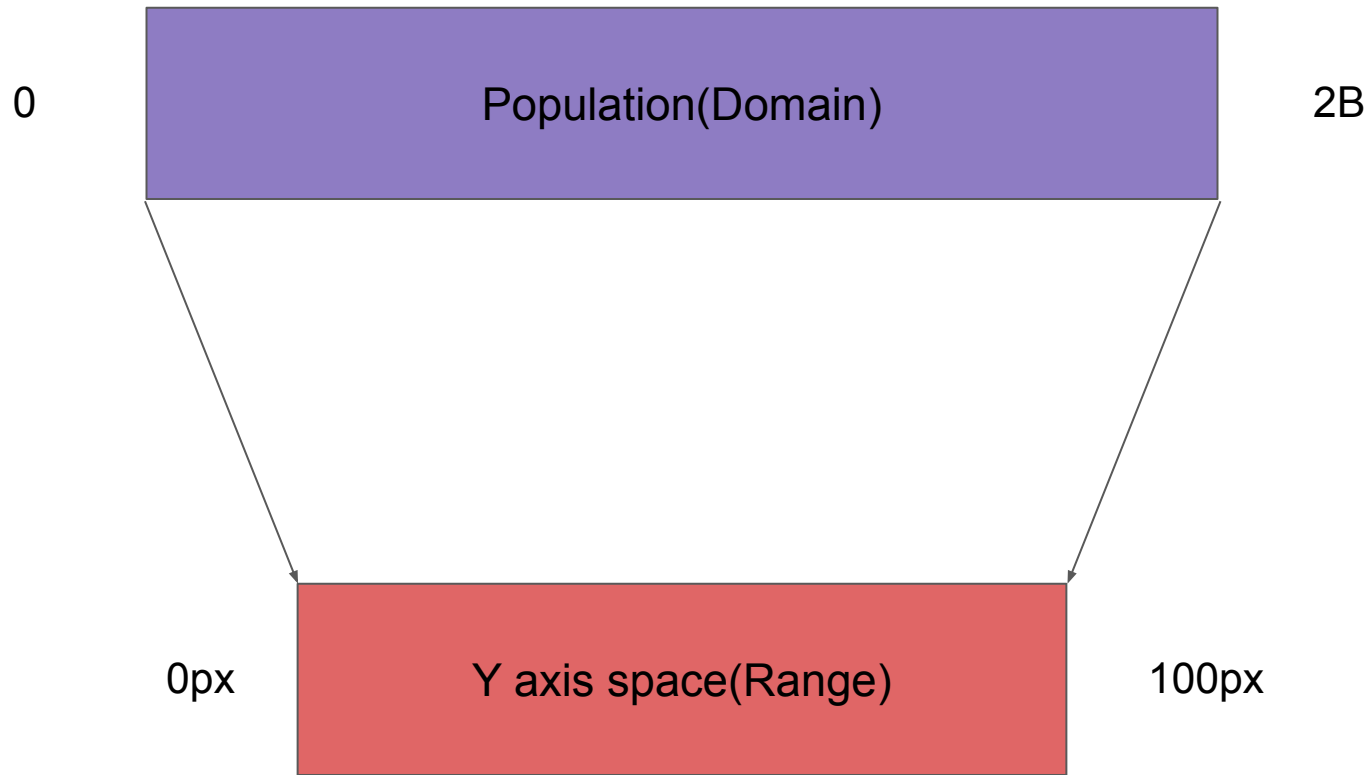

2B

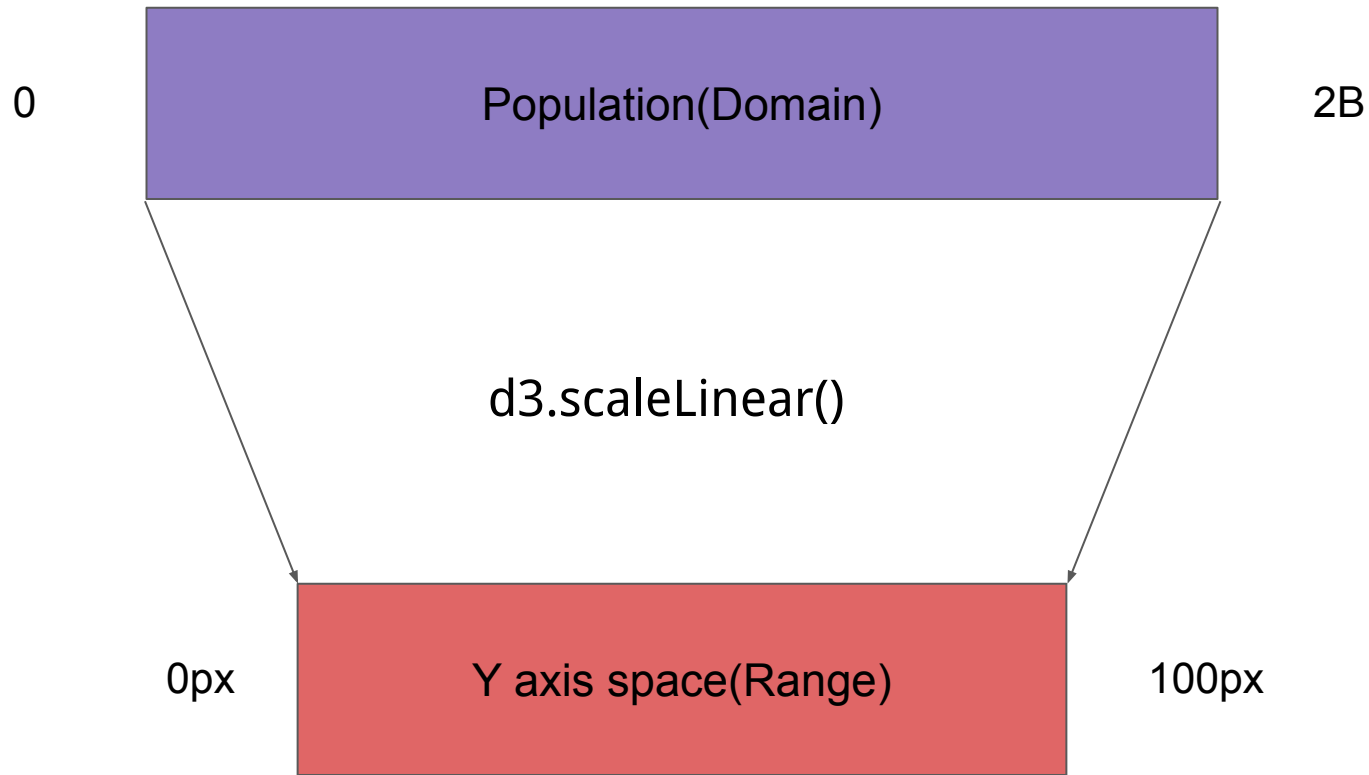

0

Y axis space

200

```
let scaleFn = d3.scaleLinear()  
  .domain([ 0 , 2*Math.pow(10,9) ])  
  .range([ 0 , 100 ])
```

scaleFn(20000000) \longrightarrow 1

Scales

eg: How do I assign country names to colors?

["Argentina", "Belarus", "Canada", "Denmark", "Egypt"]

["red", "blue", "green", "yellow"]

["Argentina", "Belarus", "Canada", "Denmark", "Egypt"]

["red", "blue", "green", "yellow", orange]

`["Argentina", "Belarus", "Canada", "Denmark", "Egypt"]`

`d3.scaleOrdinal()`

`["red", "blue", "green", "yellow", "orange"]`

A diagram illustrating the use of d3.scaleOrdinal(). At the top, a purple box contains an array of five country names: ["Argentina", "Belarus", "Canada", "Denmark", "Egypt"]. In the center, the text d3.scaleOrdinal() is displayed. At the bottom, a red box contains an array of five color names: ["red", "blue", "green", "yellow", "orange"]. Five arrows point from each country name in the top box to its corresponding color in the bottom box: Argentina to red, Belarus to blue, Canada to green, Denmark to yellow, and Egypt to orange.

```
let scaleFn = d3.scaleOrdinal()  
  .domain(["Argentina", "Belarus",  
    "Canada", "Denmark", "Egypt"])  
  
  .range(["red", "blue", "green", "yellow",  
    "orange"])
```

scaleFn("Denmark") → "yellow"

["Argentina", "Belarus", "Canada", "Denmark", "Egypt"]

d3.scaleOrdinal()

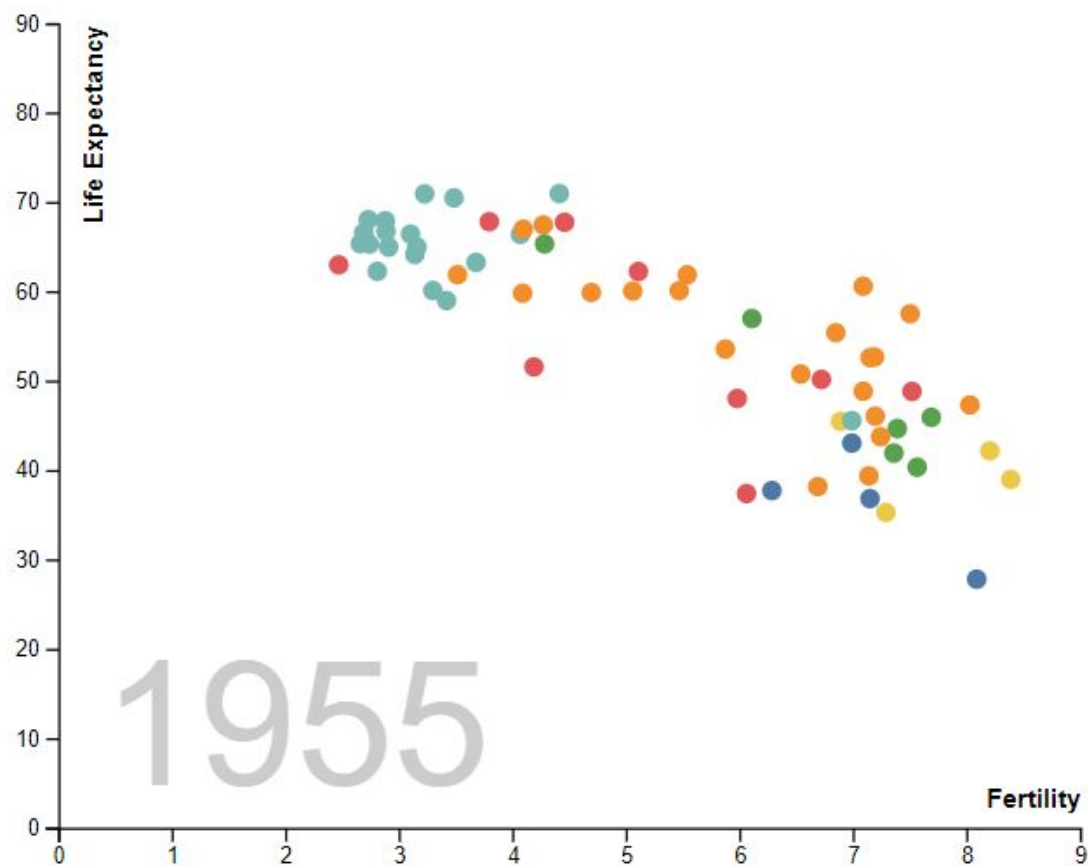

["red", "blue", "green", "yellow", "orange"]

Explore the other scales especially
`d3.scaleBand` for bars.

SVG

How do I create shapes on my page?

Margins for axes

Code...

www.yellkey.com/deal

array = [1,3,2]

width = 450

```
var scale = d3.scaleBand().range([0, 450]).domain([1,3,2]);  
console.log(scale(1)); // x = 0  
console.log(scale(3)); // x = 150  
console.log(scale(2)); // x = 300  
console.log(scale.bandwidth()); // rect width = 150
```
